

SAYAN KHADKA

Graduate Software Developer

Tauranga, New Zealand | sayankhadka211@gmail.com | github.com/sayan-k211 | linkedin.com/in/sayan-k211

Open to relocating anywhere in New Zealand | Full New Zealand driver licence and own reliable vehicle

WORK RIGHTS: I hold a three year Post Study Work Visa with open conditions, valid until August 2029. I can work in any role, anywhere in New Zealand, and I do not need sponsorship.

PROFILE

I finished my Bachelor of Applied Information Technology at Toi Ohomai in 2026 with A+ grades in 19 of my 21 papers, including 100 in Cyber Security, 99 in Algorithms and Data Structures and 98 in Client Server Web Development. For my final year project I built a voice activated Android app from scratch for a marine and environmental research team, taking it from research and planning through to a working app they use now. I work in TypeScript, Angular, C# and SQL, I have written REST APIs and the security layer around them, and I have shipped a signed release build to a client along with the handover and testing documentation. I am looking for a graduate software development role where I can learn from people with more experience than me.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Kotlin, Python, PHP, SQL and T-SQL, HTML, CSS and SCSS.

Frontend: Angular, React, React Native and Expo, component architecture, state handling, responsive layout, cross browser and cross device testing.

Backend and data: Node.js and Express, REST API design and consumption, Microsoft SQL Server and MySQL, MongoDB and Mongoose, Firebase Firestore and Authentication, data modelling and schema design.

Testing and release: User testing and defect triage, Git and GitHub with branching and pull requests, signed release builds and store deployment, secret handling, Helmet, CORS and rate limiting.

Troubleshooting: Structured root cause analysis, reproducing intermittent faults, reading application and device logs, isolating dependencies so a failing component can be replaced without rewriting around it.

Documentation: Technical and handover documentation, testing guides written for non technical users, explaining faults in plain language.

PROJECTS

Roadkill Counter, voice activated Android app (client project)

React Native, Kotlin, Firebase | 2026

- Built a hands free Android app from scratch for two researchers in the Marine and Environmental Management team at Toi Ohomai, running the project from research and requirements through to a working app they now use. Drivers report possum roadkill by voice without touching the screen, and the app saves the location, time and a spoken freshness answer to Firestore.
- Wrote the native Kotlin module that runs on device keyword detection on a background thread and passes events into React Native, so the app hears the wake word with no internet connection. Replaced the voice library part way through when the original became unavailable, and because I had kept that dependency isolated behind an interface, nothing else needed rewriting.
- Diagnosed the harder faults by reproducing them and reading device logs. The main one was a resource handling bug where the microphone stayed locked because my module released it before the listening thread had finished.
- Shipped a signed release build, installed it on the client device over a video call to confirm it worked on their hardware, and wrote the handover and testing documentation that went with it.
- Graded 92. Featured publicly by Toi Ohomai. Repository private under client confidentiality.

Personal Portfolio, full stack web app

Angular, Express, MongoDB | 2025

- Built a full stack site with an Angular frontend, an Express and Node backend and MongoDB, so content is served from the database rather than hard coded.
- Wrote the REST API and the Mongoose models, and set up Helmet, CORS and rate limiting, keeping credentials in environment variables.
- Repository: github.com/sayan-k211/sayan-dev-portfolio

SwasthyaFuel, meal preparation app

React Native, Firebase | 2025

- Built an app that suggests locally available substitutes for cultural ingredients international students cannot find, with macro tracking alongside. Solo project covering requirements, data model, interface and code.
- Set up Firebase Authentication with Google, email and guest sign in, and wrote Firestore security rules scoping access to the signed in user.
- Published to the Google Play Store as an internal test release, preparing the store listing, signed build and tester access.
- Repository: github.com/sayan-k211/swasthyafuel

EXPERIENCE

Customer Service Representative

Omanu Superette, Mount Maunganui | Nov 2025 to present

- Run the store on my own for full shifts with no supervisor on site. Every problem during the shift is mine to solve or escalate, and I decide which.
- Operate and troubleshoot the POS system and terminal hardware daily, and balance the till daily and weekly, so accuracy is checked against a hard number every shift.

Front End Developer Intern

Leading Edge Software, Birtamode, Nepal | Aug 2022 to Nov 2022

- Built interface features such as forms, menus and navigation, turning design mock ups into working code with HTML, CSS and JavaScript.
- Tested across different browsers and devices and fixed the problems that came up.

Assistant Visa Counsellor

Kangaroo Education Foundation, Birtamode, Nepal | Mar 2022 to May 2023

- Checked applications against detailed criteria and found the documents and entries that did not match, then suggested process changes that cut down delays.
- Managed a large number of open cases at once, tracking where each sat and what was outstanding.

I also worked in hospitality in Tauranga from 2023 to 2025 while studying full time, at The Freeport with Cleaver and Co, Sailor Galley and Rum Bar, and Turkish To Go. This included running the kitchen when the Head Chef was away.

EDUCATION

Bachelor of Applied Information Technology

Toi Ohomai Institute of Technology, Tauranga | 2023 to 2026

A+ grades in 19 of 21 papers, with 89 and 85 in the other two. Selected results: Cyber Security 100, Human Computer Interaction 99, Algorithms and Data Structures 99, Graphical User Interface Programming 99, Client Server Web Development 98, Web Application Implementation 97, Data Management 95, Final Year Project 92.

Microsoft Azure Fundamentals (AZ-900) | in progress

High School Diploma, Science and Computing | Kanchanjunga English Higher Secondary School, Nepal | 2021

LANGUAGES

Nepali (first language), English (fluent), Hindi (fluent)

REFERENCES

Two academic referees from Toi Ohomai available on request, including the client for my final year project.
